

Case Study

Running Cost Reduction

A client operating in the care sector approached Total Motion for advice on reducing its fleet running costs.

Contract Targets

- 1 A driver management process.
- 2 100% compliancy on service & MOT.
- 3 100% of its tail lifts to be LOLER tested and compliant.
- 4 To cut overall fleet running costs by at least 20% in two years.

Solution

Total Motion Vehicle Management worked with the care sector company to identify where running costs could be reduced and implemented measures to achieve these targets.

Process

We helped the business to enhance its operations by creating a driver management process. We also took action to ensure its industry compliancy in the areas of service, MOT and tail lifts.
